FURLING SYSTEMS

**MANUAL REEFING SYSTEMS
CRUISING, RACING &
BELOW THE DECK MODELS**

Manual reefing systems

THE STANDARD-BEARER FOR MANUAL FURLING SYSTEMS

Since the 1980's, Profurl manual furling systems have been designed according to two core principles:

RELIABILITY AND SAFETY

Whatever you're doing at sea, Profurl furling systems ensure smooth sailing under any conditions.

Do you need a furler that can handle severe weather and heavy loads? Thanks to their specially designed mechanisms, Profurl furling systems are the only systems on the market to offer truly reliable furling under severe loads ensuring your safety.

Are you looking for reliability? Profurl furling systems are designed to cover tens of thousands of miles without any specific maintenance. To prove their reliability, a ten-year international guarantee is provided with every model.

Maybe you're in search of extra performance? The weight of the Profurl system has been trimmed down to the minimum. Our Racing range will also improve your craft's overall performance.

Why choose a Profurl furling system?

- > A wide range of PROFURL furling systems for **all sailing applications**.
- > The bearings are maintained in a waterproof grease bath and require **zero maintenance**.
- > **Cruising models** for boats from 5 to 26m, with colourless anodised round reefing foils.
- > **Regatta models** for boats from 6 to 20m, with black anodised oval reefing foils.
- > **A wide range of installation options** to adapt to the deck of your craft
- > Minimised weight.
- > **Guaranteed longevity with corrosion protection** (anodization, insulation)
- > **An international 10-year guarantee**.

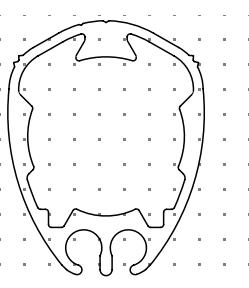

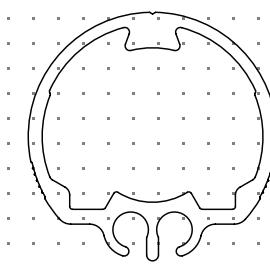

A brand-new design that's better for the environment

Profurl furling systems have recently received a design upgrade, abandoning their traditional green anodization for black. This new treatment provides the same level of corrosion protection. It's also better for the environment.

Two ranges of headsail manual furlers

CRUISING SYSTEMS

With 9 models, the Cruising range offers robustness and safety. They are dedicated to boats from 5 to 26 m. They integrate innovations like the double cage arms and the new feeder design. The Cruising models are equipped with silver anodised extrusions.

RACING SYSTEMS

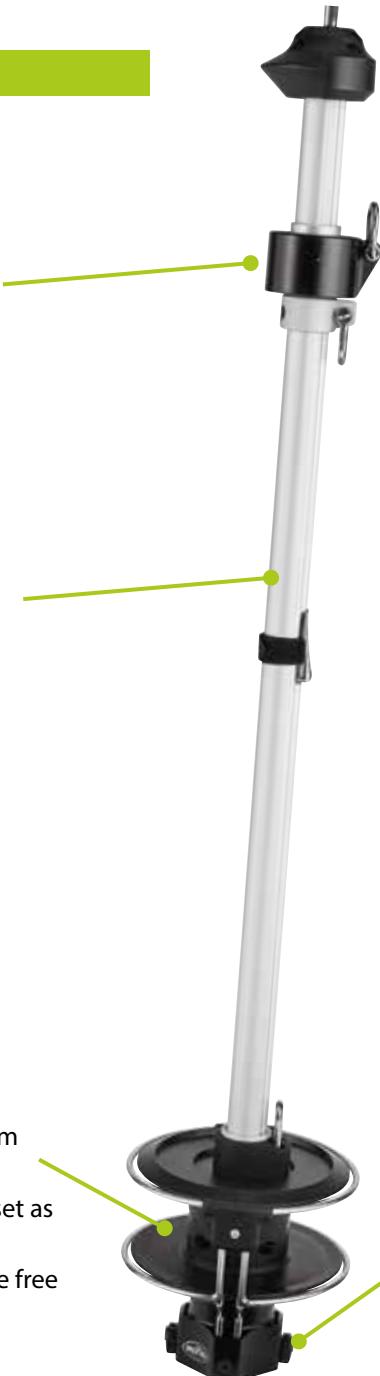

The Racing systems bring performance and ease of use thanks to innovations like the opening pre-feeder delivered as standard. They are dedicated to boats from 6 to 20 m and have been especially designed for the racing-cruising sailors. They are equipped with black aerofoil extrusions.

Manual reefing systems

System components

Swivel:

- Ball bearings sealed in a grease bath.
- Two watertight double lips seals to prevent foreign bodies from entering (water, salt, dust...).

Extrusions:

- Aluminium extrusions (Cruising: round silver anodised / Racing: aerofoil black anodised).
- Light weight specialised alloy.
- Optimum torque resistance.

Wrapstop:

Fixed at the top of the stay, it radically prevents the halyard from wrapping around the stay, and reduces potential halyard chafe.

Feeder (except C290):

- Stainless steel (316L).
- No fitting tool, attachment is made with a Velcro webbing.
- Option: opening pre-feeder from Wichard.

Drum mechanism:

- Withstands tremendous impact.
- Double cage arms prevent the furling line from jumping off the drum.
- Removable: the headsail can be hoisted and set as per a racing foil.
- The drum mechanism contains a maintenance free ball bearings system.

Locking devices:

- Standard ones for Cruising and Racing models with short link plates
- Stainless steel locking devices with insulated bushes (recommended for boats with high/intensive use). Also mandatory in case of closed to deck fitting.
- The locking devices are available for standard, medium and long link plates attachment configurations.

Profurl furling systems: the last word in reliability and longevity

Only Profurl technology offers optimal reliability and longevity. Profurl mechanisms are designed to use special bearings which can furl sails under any conditions.

They are fully waterproof, protecting them from corrosion and contamination for maximum longevity.

High performance systems...

- > The extrusions are made lighter and stronger thanks to a special alloy (6106).
- > The ball bearings have an optimized weight / resistance ratio.
- > The Wichard opening pre-feeder is delivered as standard on Racing models to hoist the sail faster.

...reliable and maintenance free

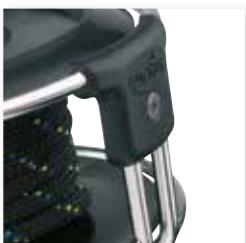

- > The ball bearings are made of high strength 100 C6 carbon steel and are sealed in a grease bath to increase their working load and prevent corrosion.
- > Watertightness is achieved by the use of two double lip seals preventing foreign bodies (salt, sand, dust, water) from entering the bearing mechanism.
- > The not deformable plastic drums withstand impact (e.g: anchor bump, collision) and are resistant to UV.

Ease of use

PROFURL manual furling systems have been designed to ease operations:

- > The standard feeder enables to easily hoist the sail by only one crew member.
- > The optional opening pre-feeder, manufactured by Wichard, smoothly guides the sail's luff tape into the extrusions, whilst rapidly hoisting the sail. When re-hoisting it, the pre-feeder can be reattached to the luff tape without removing the headsail from the extrusion.

Safety of use

- > Double cage arms (exclusive to PROFURL) prevent the furling line from jumping off the drum and allow the furling line to re-align onto the drum by simply pulling on the line.
- > Stainless steel locking devices are dedicated to boats with a closed to deck fitting.
- > On the C480, C520, C530 and R480 models, special locking devices have been designed to withstand the higher loads.

Reliability of materials

PROFURL rigorously selects the materials to be used for the manufacturing of the different components: these parts are submitted to bench-tests in order to assess their resistance.

- > Ball bearings are made of high strength 100 C6 carbon steel.
- > Drums are made of high impact plastic.
- > Extrusions use a special alloy (6106) and offer one of the best weight / resistance ratios.
- > The feeder and the opening pre-feeder are made of stainless steel (316L), except for C290.

Manual reefing systems

Long link plates fitting

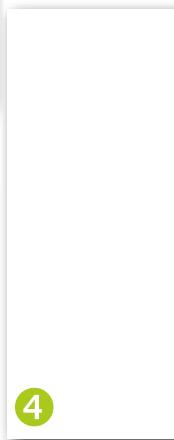

Standard fitting with short link plates

Long link plates fitting

Close to the deck fitting with stainless steel lockers

Fitting with turnbuckle cylinder

Below the deck fitting

What kind of fitting for my furling system?

1

STANDARD FITTING WITH SHORT LINK PLATES

Type of locking devices: standard and threaded pin for a stay eye fitting

- ⊕ Raise the drum mechanism in order to clear the deck in case of obstacles (bow roller etc.).
- ⊕ Fitting with adjustment plates is also possible

2

FITTING WITH LONG LINK PLATES

Type of locking devices: standard

- ⊕ The drum can be lifted to avoid interference with the anchor and to reduce the sail chafe on the lifelines.
- ⊕ The forestay length is still adjustable.

3

FITTING CLOSE TO THE DECK

Type of locking devices: stainless steel and smooth pin

- ⊕ Increase the luff length

4

FITTING WITH A TURNBUCKLE CYLINDER

The rigging screw goes into the turnbuckle cylinder.

- ⊕ The furler can be fitted lower to the deck.
- ⊕ It is also possible to use a combination of a turnbuckle cylinder and long link plates.

5

BELOW THE DECK FITTING

An aesthetic solution chosen by some boatbuilders (Bénéteau, X-Yacht). Please contact us for more information.

- ⊕ Adjustable tack fitting

C260: THE FURLING SYSTEMS FOR LIGHT BOATS

Especially designed for boats from 5 to 7 m, the C260 model is a self-contained halyard furling system. Cost-effective, easy to install on the existing forestay, the C260 does not require any maintenance.

> The self-contained halyard system

On light sail boats - especially fractionally rigged - it is usually difficult to obtain a tight forestay. The C260 with its self-contained halyard helps to minimise forestay sag by reducing mast compression created by a combination of loads from the halyard and sail.

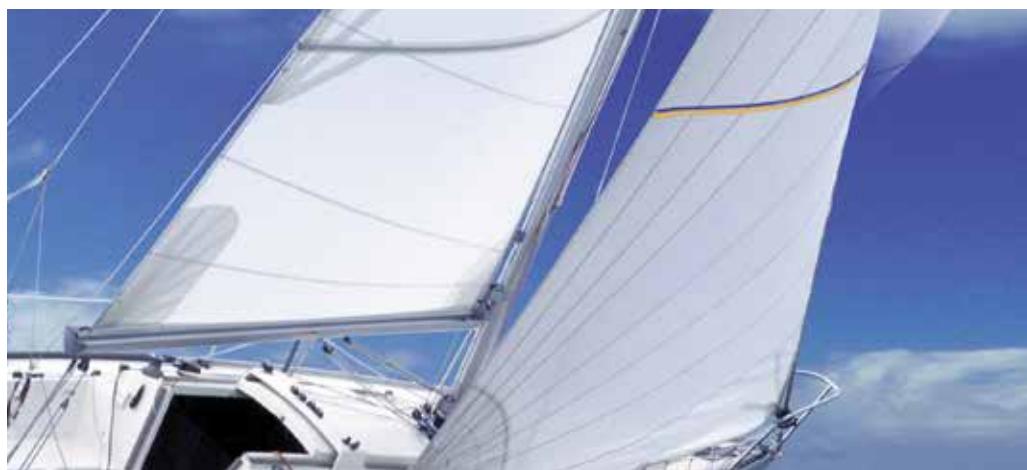

> Ease of installation

The C260 does not require a specialised attachment to the forestay stem head, it is simply attached to the lower swage terminal of the forestay (eye and holes plates or turnbuckle).

For boats transported and stored on a trailer, the C260 can be separated in two sections reducing the risk of damage while in transit.

> Ease of use

The self-contained halyard passes over a sheave box fitted into the top of the extrusion and returns down to a sheave and cam cleat. Once the sail is hoisted and tensioned, the remaining length of the halyard is used as a furling line.

Manual reefing systems

CRUISING MODELS

- > Large range of 10 models for boats from 5 to 26 m.
- > Round and silver anodised profile.
- > Several fitting possibilities: adjustment plates, long link plates, turnbuckle cylinder, below the deck fitting, stainless steel locking devices
- > Additional option: opening pre-feeder, stainless steel locking devices
- > 10 year world wide limited warranty.
- > **New:** the C290, C320, C350, C420 and C520 models can hold an increased forestay diameter.
For example: for an 8mm forestay, you can choose a C320 instead of a C350. If using a swageless eye, you must take both the maximum sail surface area and the drum capacity into consideration.

How to choose my furling system?

To correctly select your own furling system, refer to the following steps:

- Step 1: Define your sailing program: cruising or racing-cruising.
- Step 2: Measure accurately the diameter of the forestay (see table below).
- Step 3: Choose one of the fitting systems described on page 14.

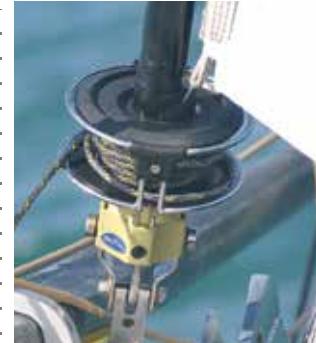

Boat length (meter) & max sail area

THE SPECIAL R250 FOR J80:

The R250 is the official furling system for the J80 class.

It is available as a complete version or as a kit (to be mounted on Harken extrusions).

The specific swivel system uses ceramic bearings, allowing you to furl the genoa even faster.

Manual reefing systems

BELOW THE DECK MODELS

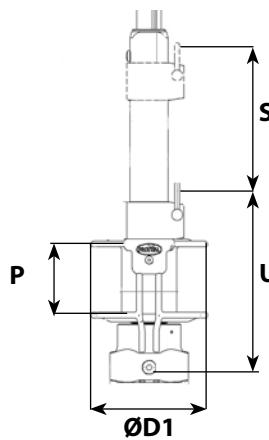

- > For Cruising models from C290 to C430 and Racing models from R250 to R480
- > Adjustable tack point above the deck
- > Aesthetic solution enabling easier operations with anchor
- > Optimized luff and thus better boat performances
- > 10 year world wide warranty
